Professional Summary

Full Stack Engineer specializing in scaling cloud-native backend systems and orchestrating complex React frontends. Expert in rescuing high-load servers, optimizing database connections, and offloading CPU-intensive tasks to serverless cloud environments. Proven track record of managing massive frontend ecosystems (5+ portals), architecting private NPM registries, and increasing backend server efficiency by up to 800% during peak traffic.

Core Competencies

- Backend & DB  Python (FastAPI, Django), Node.js (Express), PostgreSQL, MongoDB, GEVENT, UOW Pattern.
- Frontend  React, Next.js, TypeScript, Tailwind CSS, Redux Toolkit, NPM Package Architecture
- Cloud & DevOps  Docker, Kubernetes (KIND, HELM), GCP (Cloud Tasks, Cloud Run), AWS (EC2), Jenkins CI/CD
- Architecture  Performance Optimization, Serverless Offloading, Background Syncing

Professional Experience

Full Stack Engineer | Ticketly.pk

(Dec 2025 – Present)

- **Backend Scaling:** Successfully rescued the main application server during critical load failures. Optimized database connection pools, minimized DB round-trips, and refactored the Unit of Work (UOW) pattern.
- **Concurrency Optimization:** Implemented GEVENT to handle highly concurrent requests, increasing overall server efficiency and throughput by 700% -- 800%.
- **Cloud Architecture:** Decoupled the monolithic architecture by moving CPU-intensive and I/O-bound tasks (e.g., PDF generation, email dispatching) to Cloud Tasks and Cloud Run, significantly stabilizing the main thread.
- **Frontend Leadership:** Managed the React ecosystem across 5 web portals. Architected and published a private NPM package to centralize a complex 5-step form module (featuring an advanced Google Forms-style builder), enabling background data synchronization without blocking the UI.

Full Stack Developer | PakLawAssist

(Jan 2025 – Nov 2025)

- Actively contributed to Python-driven backend optimizations using FastAPI, standardizing REST API consumption and rapid data fetching across multiple AI-powered legal portals.
- Designed and developed secure, accessible frontend interfaces with pixel-perfect precision using React.
- Explored and implemented deployment automation, configuring local Kubernetes clusters and deploying automated Jenkins and GitHub Actions CI/CD pipelines to prepare backend systems for production scalability.

Freelance Full Stack Engineer

(2025)

- Successfully delivered 5 end-to-end B2B solutions, specializing in scalable React frontends integrated tightly with optimized Node/Python backends.

Strategic Engineering Projects

School Management System (Personal SaaS Full Stack Project)

- Architecting a multi-tenant PERN stack application moving toward a cloud-native microservice structure.
- Configuring Dockerized environments with planned Kubernetes orchestration and Jenkins-based CI/CD pipelines.

AI Hedge Scratch (Node-Based UI):

- Developed an interactive, node-based workflow platform enabling users to visually map and manage complex data nodes utilizing advanced React state management and canvas logic.
